

Bystronic glass at Gulf Glass 2015 in Dubai

Innovative systems for modern glass processing

Neuhausen-Hamberg (Germany), 07th August 2015. At Gulf Glass 2015 from September 14 – 16 in Dubai Bystronic glass will inform about its innovative system solutions for the modern processing of architectural and automotive glass. The customers will get an overview about the latest machinery for the manufacturing of insulating glass, handling equipment and for the pre-processing of automotive glass at the stand of its Middle East Representative HIET, booth no. 3B141. To underline the Preferred Partner cooperation with Hegla both partners present itself at one joint stand. Consequently, customers will be able to conduct joint talks comfortably with experts from both companies.

Insulating glass manufacturing

Whether an individually configurable, fully-automatic line for insulating glass unit production with warm-edge spacers is required or an entry-level solution is needed – Bystronic glass offers the line or machine

to meet the requirements of every single insulating glass manufacturer:

- **B'COMFORT** – the start-up solution in automated insulating glass production
- **B'VARIO** – the individually configurable I.G. production line for all established spacers, be it conventional spacers, flexible spacers from the reel or Thermo Plastic Spacer (TPS®).
- **B'SPEED** – the new benchmark in the field of triple and quadruple I.G. manufacturing
- **B'JUMBO** – the system solution especially designed for the manufacturing of large sized I.G. units.

Handling systems

Bystronic glass handling systems ensure easy and safe transport. They allow a flexible and economic use in every flat glass and plate processing branch of industry. This also includes the best seller, the Easy-Lift, which has convinced customers in the glass processing industry with its rigid guidance and

its low own weight since 1998. In recent years, the handling equipment has also gradually won over large window manufacturers with the flexibility of the frame design and how it can fulfil their requirements.

Automotive glass pre-processing

In the form of the **champ'speed**, Bystronic glass has introduced a completely new machine generation for the pre-processing of automotive glass onto the market. In the **champ'speed 2in1** version, it is the first machine in the world that can break automotive glass with or without a template on one single machine.

Service – wherever the customers need it

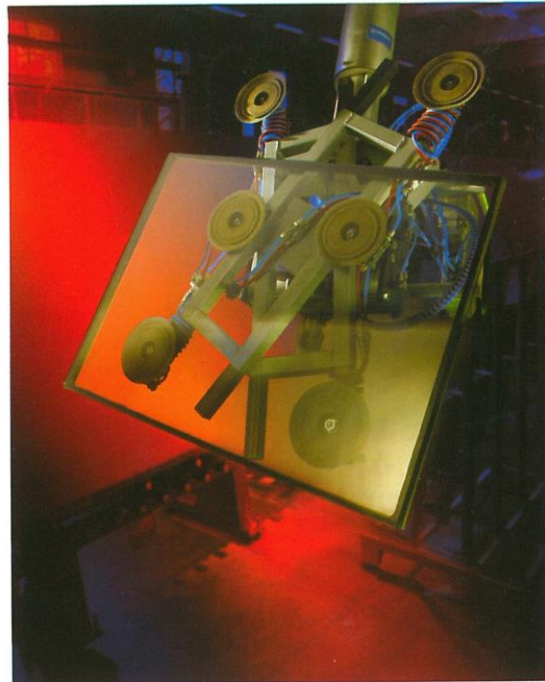

Right from the very first minute, Bystronic glass supports its customers during the project planning. The customer service department is then on hand all over the world for the delivery of spare parts and on-site support. Maintenance contracts and individual training sessions round off the range of services on offer.

About Bystronic glass

Bystronic glass symbolizes innovation with machinery, systems and services for the processing of architectural and automotive glass focussed on tomorrow's market. From basic requirements through to entire, customized installations Bystronic glass provides pioneering solutions – naturally, all in the highest quality. Bystronic glass is an international brand with globally operating companies that support their customers on site and through own sales and service companies. Since 1994, Bystronic glass is part of the Conzzeta AG, a renowned Swiss industrial holding company.
